• SPECTRUM

Our combination of white and red LEDs result in a relatively high ratio of blue light. Blue light keeps your crop compact in the vegetative stage and adds to an optimal morphogenesis and light interception by the plant. The spread of red LEDs in the array guarantees a uniformly mixed spectrum on your crop at short distance. A full spectrum increases the quality of your crop.

• EXTERNAL CONTROL

LED MODEL S 630W is compatible with our controllers. It is equipped with an external RJ14 Cable and allows you to install 200 fixtures per controller port by simply daisy chaining the fixtures.
